**Claim 2:** an inverter control circuit; and a simultaneous switching prevention circuit that delays a turn-off of a first switching element of the first pair of switching elements, wherein the first switching element corresponds to a first phase and an electrode opposite an electrode corresponding to a second switching element of the second pair of switching elements, the second switching element corresponds to a second phase, and the delay is generated within a predetermined time after the second switching element of the second pair of switching elements is turned on with the combination of the elements of the claim.

**Claim 3:** an inverter control circuit; and a simultaneous switching prevention circuit that delays a turn-off and a turn-on of a first switching element of the first pair of switching elements, wherein the first switching element corresponds to a first phase and an electrode opposite an electrode corresponding to a second switching element of the second pair of switching elements, the second switching element corresponds to a second phase, if the switching prevention circuit delays the turn-on, the delay is generated within a predetermined time after the second switching element of the second pair of switching elements is turned off, and if the switching prevention circuit delays the turn-off, the delay is generated within a predetermined time after the second switching element of the second pair of switching elements is turned on with the combination of the elements of the claim.
